Decoding DORA: Navigating the Technical Landscape of Financial Cybersecurity

Join us for an enlightening discussion chat as we delve into the intricacies of DORA (Digital Operational Resilience Act) requirements, setting the stage for a robust discussion on the evolving landscape of cybersecurity in the financial sector. This session will explore the four pivotal domains outlined by DORA: ICT risk management and governance, incident response and reporting, digital operational resilience testing, and third-party risk management. We'll unravel the responsibilities placed on financial entities and ICT providers, from cultivating a digital culture of innovation and collaboration to the rigorous testing and reporting mandated for incident management. Discover how organizations can proactively adapt to these requirements, leveraging insights from expert guests and anticipating the forthcoming technical standards that will shape the future of financial cybersecurity.

Aumentando a Transparência na Cibersegurança: Uma Resposta às Novas Regulamentações

A crescente complexidade e frequência das ameaças cibernéticas estão impulsionando uma transformação significativa no campo da cibersegurança, em que a transparência se torna cada vez mais essencial. Novas regulamentações representam uma mudança de abordagem. Essa transição apresenta desafios importantes, incluindo o cumprimento de prazos rigorosos, a proteção de dados sensíveis e o gerenciamento dos riscos à reputação corporativa.
Esse novo cenário exige que as empresas compreendam e simplifiquem as regulamentações, alinhem expectativas do conselho e expandam a cibersegurança para equipes externas de relatórios, promovendo uma abordagem mais integrada e proativa para a segurança digital. A transparência na cibersegurança deixa de ser uma mera obrigação regulatória e passa a ser um diferencial competitivo, essencial para a governança moderna e para a construção de um ambiente de negócios seguro e resiliente.

Unlocking Human-AI Collaboration

Implementing AI is difficult since different techniques solve different problems, however CXOs are no stranger these challenges. The insights gained from AI applications in cybersecurity provides a blueprint for its broader implementation throughout the enterprise, ensuring a responsible approach to adoption.
By exploring the recent history and experiences with pioneering AI applications, this session will provide valuable insights for navigating the wider adoption of different AI technologies.

CIO versus CISO: A Duet or a Duel?

In today’s digital-first landscape, the roles of CIO and CISO are critical, yet they often find themselves in a dynamic tension that can either propel or stymie an organization's progress. This session will explore the delicate balance between the CIOs mandate to drive innovation, efficiency, and growth through technology, and the CISOs duty to protect those advancements from an ever-evolving landscape of cyber threats. Are these roles destined for conflict, or can they harmonize to create a resilient, agile digital strategy? Through case studies and best practices, we'll unpack how organizations can foster collaboration rather than competition between these roles—building bridges that enhance security without stifling innovation. Ultimately, the talk will examine how a duet approach, based on mutual understanding and shared goals, can transform potential duels into unified efforts for digital transformation and cybersecurity.

AI vs Human Hackers - The Evolution of Cyber Attacks

AI is rapidly changing the landscape of cyberattacks, with cybercriminals and nation-states using it to their advantage. The increasing use of AI is making future attacks far more sophisticated and dangerous. Massive data breaches—like the recent exposure of over 26 billion records—are giving AI the ability to learn from vast amounts of personal information, enabling highly targeted and personalised attacks.

In the next three years, AI will revolutionise phishing scams, creating emails and messages so convincing they'll be almost impossible to detect. The scale of these attacks will increase exponentially, making traditional defences ineffective. Deepfake technology will further enhance the threat, allowing attackers to impersonate colleagues, friends, or even high-value corporate targets in real-time interactions.

To defend against this, organisations must take proactive steps now—training employees on the dangers of AI-driven cyber threats, reducing reliance on email, and adopting more secure communication platforms. Vigilance is key, as AI continues to escalate the complexity and scale of cyberattacks, making it crucial for individuals and businesses to stay ahead of these evolving threats.

FIRESIDE CHAT

Modern Pioneers: Navigating Digital Transformation in 2024/2025

2:35 PM-3:20 PM

CIOs play a crucial role in driving their organization's digital transformation efforts. The COVID-19 pandemic has accelerated the adoption of digital technologies, and CIOs must continue to lead the way to stay competitive and meet the evolving needs of customers and employees. This requires a deep understanding of the organization's goals, processes, and IT infrastructure, as well as collaboration with other business leaders. By successfully leading digital transformation, CIOs can position their company for long-term success in a digital world.
