BEYOND THE AI HYPE: ARCHITECTING THE LEAN, INTELLIGENT ENTERPRISE

July 23, 2026

5:30 PM-9:00 PM

Pacific Time

Let's be honest: the path to production AI isn't lined with more tools—it's often bogged down by them. Every new AI initiative seems to bring another layer of complexity, cost, and technology sprawl. So, how do you build an AI-ready enterprise without breaking your stack? Join MongoDB and Globant for an exclusive executive dinner and candid peer discussion. We'll move beyond the AI buzzwords and focus on a key reality: AI readiness starts with your data foundation, not your model. Together, we'll explore how senior leaders are simplifying their architectures, accelerating developer productivity, and building the lean operational data layers needed to power real-time, intelligent applications. Over great food and even better conversation, we'll discuss what's truly holding organisations back from unlocking AI-driven innovation.
