SECURITY FOR AWS WORKLOADS. WHAT IS NEEDED TODAY AND TOMORROW?

November 28, 2023

6:00 PM-9:30 PM

Pacific Time

Many organizations are struggling with how to secure their AWS environments because there is "no standard way", there is not one tool needed. We know you and your teams don't have all the answers, but you likely have some. Thus, come join us for dinner at AWS re:Invent and engage with your peers. Solving security for the public cloud involves many people across your enterprise. Join us to share ideas, perspectives, learnings and struggles and be prepared for better conversations the following day, week and year. Come join us at re:Invent to share your thoughts and hear from your peers what they are doing and thinking about cloud security. Learn, question, share and then go explore and talk to vendors at re:Invent to learn more and to compare and contrast in real time.
