

# AGENDA

The Future of IT and Cybersecurity

# CISO & CIO Think Tank

## SPEAKERS

**Michael Owens**  
BISO  
Equifax

**Ben Halpert**  
Field CISO  
SHI

**Charles Andry**  
Chief Architect  
Jackson Healthcare

**Adolph Barclift**  
Former CISO  
Five Star Bank

**Tamika Bass**  
Head of  
Cybersecurity  
Director (CISO)  
Gannett Fleming

**Irene Thong**  
Global IT &  
Cybersecurity  
Executive  
Printpack Inc

**Robert Sheesley**  
CIO  
Wrench Group

**Rahul Ganorkar**  
SVP IT  
Randstad North  
America

**Emily Austin**  
Security Research  
Manager, Senior  
Researcher  
Censys

**Sam Krishnamurthy**  
CTO  
Crawford

**Mike Takla -  
NO LONGER  
W/  
COMPANY!!!**  
VP of Sales  
RevealSecurity

**Ofer Klein**  
Co-Founder & CEO  
Reco

**Adolph Barclift**  
Former CISO  
Mergence Global

Morning Networking

**10:15 AM-11:15 AM**

Opening Remarks

**11:00 AM-11:15 AM**

VISION KEYNOTE PANEL

## Bridging the Gap Between IT and the Business

**11:10 AM-11:55 AM**

Bridging the gap between business and technology is not easy and requires discipline and balance between technology, people, and the business. For so many organizations today, technology is the business. Technology needs to be understood as a critical enabler in every part of the organization from the front line to the back office. It creates new value by crunching data to deliver new insights, it spurs innovation, and it disrupts traditional business models.

For business and technology leaders alike, new actions and behavioral changes can help their organizations make this shift. CIOs must take responsibility for problems, they should convey that when technology fails, many people typically share responsibility.

### CHAIR

**Ben Halpert**  
Field CISO  
SHI

### PANELISTS

**Michael Owens**  
BISO  
Equifax

**Robert Sheesley**  
CIO  
Wrench Group

**Irene Thong**  
Global IT &  
Cybersecurity  
Executive  
Printpack Inc

**Rahul Ganorkar**  
SVP IT  
Randstad North  
America

Cyversity Mentorship

**11:55 AM-12:00 PM**

## DISRUPTOR

1:15 PM-1:30 PM

# Detecting Imposters and Rogue Insiders in SaaS Applications

The combination of rogue insiders and external attackers makes SaaS application detection a massive pain point for enterprises, particularly within core business applications. External attackers leverage stolen credentials to impersonate an insider and connect to applications, while at the same time insiders are not sufficiently monitored. Such examples could include a fraudster's takeover via social engineering, or incorrect implementation by an employee, or a doctor accessing celebrity patient medical data, or a salesperson downloading a report of all customers before switching to work for a competitor. Even after the enterprise receives a complaint or is otherwise suspicious, detection of these breaches usually consists of manual sifting through tons of log data from multiple sources. In this session we will explore the growing challenge of SaaS application detection, explain why current detection solutions are usually ineffective, and share solutions using real customer examples.

## Supply Chain

1:25 PM-2:10 PM

Supply chain attacks pose a significant risk to organizations that rely on third-party vendors or suppliers. These attacks can lead to data breaches, theft of intellectual property, and disruptions to the supply chain. To address this threat, companies are implementing new supply chain-specific security tools and processes. For example, they are performing risk assessments, implementing controls to mitigate vulnerabilities, and requiring vendors and suppliers to comply with specific security standards. Additionally, some companies are exploring the use of blockchain technology to track goods and prevent fraud. Overall, securing the supply chain requires a coordinated effort from all stakeholders. By implementing best practices and innovative solutions, companies can better protect their data and systems from cyber threats.

### CHAIR

**Ben Halpert**  
Field CISO  
SHI

### PANELISTS

**Tamika Bass**  
Head of  
Cybersecurity  
Director (CISO)  
Gannett Fleming

**Emily Austin**  
Security Research  
Manager, Senior  
Researcher  
Censys

**Michael Owens**  
BISO  
Equifax

DISRUPTOR

2:15 PM-2:30 PM

## Leveraging Artificial Intelligence for SaaS Discovery

In today's interconnected business world, companies rely on SaaS applications as the operating system of business, which can pose significant cybersecurity risks. This makes it critical for companies to have effective security measures in place to properly secure their entire SaaS environment. Failure to do so can result in data breaches, financial losses, and reputational damage. To mitigate this risk, companies must ensure they are monitoring not only the SaaS applications that are managed and known to the IT team, but their entire SaaS environment. Application discovery provides a comprehensive view into the entire SaaS ecosystem, including what managed applications have access to data, connected third-party apps, and even shadow apps, as well as who has enabled them, and the level of access they've been granted. Using a combination of graph algorithms, anomaly detection, NLP, and GenAI tools, solutions leveraging AI can provide a complete picture of interactions and activities across users. This insight can be used to pinpoint common causes of a breach such as misconfigurations, overly permissioned users, and compromised accounts. In this session, we'll explore the importance of investing in SaaS discovery, how AI can add the context needed to protect against common causes of breaches, and how organizations can secure their SaaS from the most common risks that can lead to a breach in 2023 and beyond.

# The Promising Future of Artificial Intelligence (AI): Opportunities and Challenges Ahead

The potential of Artificial Intelligence (AI) is vast, as it is now being utilized across all industries. With the combination of machine learning, AI has made significant improvements in the field of cybersecurity. Automated security systems, natural language processing, face detection, and automatic threat detection are some examples of how AI is revolutionizing cybersecurity. However, AI is also being used to create intelligent malware and attacks, which can bypass the most up-to-date security protocols, making it a double-edged sword. On the positive side, AI-enabled threat detection systems have the ability to predict new attacks and immediately notify administrators in case of a data breach.
