AI ADOPTION: FROM DATA FOUNDATIONS TO AGENTIC AI

March 19, 2026

6:00 PM-9:30 PM

Eastern European Time

Enterprise AI is moving beyond experimentation. While many organizations have established strong data foundations and explored early machine learning and generative use cases, leaders are now navigating the next shift-- toward AI systems that can reason, plan, and operate with increasing autonomy.

This private executive engagement will explore how organizations are progressing from foundational data strategies and Generative AI into the emerging landscape of Agentic AI.

The conversation will focus on what it takes to scale AI responsibly, align teams and governance, and translate advancing capabilities into real business value. Over a nicely curated refecton, attendees will engage with peers to examine practical lessons from enterprise environments, including how to move beyond pilots, prepare for more autonomous systems, and ensure AI initiatives remain secure, measurable, and aligned with organizational priorities.
