BUILD TRUST IN THE AGE OF AI: MOVE FROM REACTIVE DEFENSE TO PROACTIVE RESILIENCE

June 18, 2026

12:00 PM-1:30 PM

Eastern Time

As cyberattacks approach near-zero breakout times, the threat landscape is rapidly shifting toward a reality where zero-days become everyday occurrences. Yet C-level execs and Security Operations Center (SOC) leaders are unprepared; few rigorously test AI before deploying agents to production, and most still lack confidence in deploying AI into production environments. Designed for executive audiences, particularly SOC and security leaders, this 90 minute virtual event will highlight how collaborative testing and training approaches can accelerate AI adoption while ensuring operational confidence. Keynote speaker, FC (Freakyclown), a world-renowned ethicalhacker and former Head of Offensive Cyber Research at Raytheon, will show C-suite and SOC leaders how to act decisively in today's AI-driven threat landscape. (include his picture here?) Attendees will: • Learn how organizations can build trust in AI by testing intelligent agents alongside human operators in realistic, production-like environments • See, how by simulating adversarial scenarios, SOC teams can validate performance, uncover gaps, and strengthen resilience before real-world threats emerge • Hear directly from cyber experts on practical strategies to level today's asymmetric battlefield This executive-level event will deliver expert insights on how to proactively model attacks, evaluating both human and AI readiness, and transforming your security posture.
