FROM PILOTS TO PRODUCTION: DIGITAL WORKFORCE MANAGEMENT FOR THE ENTERPRISE

September 30, 2025

5:30 PM-9:00 PM

Eastern Time

Many enterprises have proof of concepts for AI agents, but few have a managed digital workforce operating across lines of business with clear roles, guardrails, and ROI. This executive briefing introduces Digital WorkforceIQ (Digital Workforce Management)—an Azure native approach to provisioning, orchestrating, and governing autonomous and semiautonomous agents at scale. We'll explore how to treat agents like employees—onboard, assign, supervise, and continuously improve—while enforcing policy as code, human in the loop controls, and full auditability.

Drawing on Neudesic's reference architecture (Knowledge Fabric, Nexus Core & Exchange, Sentry, Orchestrator) and Microsoft's secure cloud foundation, we'll walk through real world patterns that accelerate time to value without compromising compliance. Leaders will learn how to identify high value workflows, establish an AI operating model, and connect agent actions to measurable business outcomes.

Attendees will leave with a governance checklist, a 90 day adoption plan, and an executive narrative to move from experiments to

enterprise wide impact.
