UNLOCK YOUR AI POTENTIAL WITH AN
INNOVATIVE DATA FOUNDATION

December 16, 2024

5:30 PM-9:00 PM

Eastern Time

AI progresses so fast that most organizations don't even know they're not adapting quickly enough. The ones that do, however, are developing devastatingly good data foundations to power AI and analytics. Market leaders are infusing automations into their data processes to drive efficiencies and value, creating the observability they need to swiftly manage costs and risks. Others are pushing the envelope further, with innovative use cases for predictive modelling and using new levels of observability to better define company risks and costs. Asset management giant, Vanguard, uses this approach to handle its immense data volumes and workloads, including a daily spike of 60 million concurrent data updates, and bring compute costs down by 30% – are you ready to do the same?
