AGENDA

Architecting Success: Data Foundations and Gen AI Innovation in Modern DevOps

Executive Dinner

SPEAKERS

Mark Ross
Chief Architect - AWS
Atos

Daniel Harrisson
Senior AI/ML Specialist
AWS

Simon Withers
Global Head of Growth for Cloud & Infrastructure
Atos

Pramod Tek
IT Director
Balfour Beatty

Mukul Madhav
Head of Digital & AI Innovation
DHSC

Kévin Wu
Exec. Director of Data & AI
JP Morgan Chase

Shaaz Mahboob
Head of Digital Development
NHS England

Tatiana Kalganova
Director of Research, AI Social & Digital Innovation
Brunel University London

Fox Ahmed
Global Head of Cybersecurity & Technology and Data Protection Regulatory Risk
BNP Paribas

ARCHITECTING SUCCESS: DATA FOUNDATIONS AND GEN AI INNOVATION IN MODERN DEVOPS

October 08, 2025
6:00 PM-9:30 PM

United Kingdom Time

Generative AI (gen AI) is transforming DevOps by infusing intelligence into nearly every phase of the software delivery lifecycle. It goes far beyond traditional automation, enabling predictive capabilities, real-time decision-making, and dramatically improved efficiency and reliability. From planning and development to testing, release, and operations, gen AI is helping teams work faster, smarter, and with greater confidence.

AI is constrained by the data it can access. Traditional data challenges such as siloed databases, poor interoperability, or inconsistent governance are not just problems; they are barriers to AI innovation that limit what is possible and beg the question of how to bridge the gap between AI potential and data limitations.

Join us for an exclusive in-person event to explore the technical requirements for successful enterprise generative AI initiatives. We'll dive into real-world use cases—from intelligent automation in planning and AI-driven code generation, to streamlined testing, infrastructure as code, and frictionless operations. Connect with peers and industry experts to shape AI-enabled DevOps future while ensuring solid enterprise data architecture.
