## AGENTIC AI AS THE ULTIMATE VALUE CREATION ENGINE

Most PE-backed businesses have agentic AI as a pillar of their value creation, and despite being critical for long-term success, balancing the need to invest in agentic alongside the immediate need for operational efficiency means that many aren't accelerating their agentic solutions quick enough. The challenge is that these delays can exponentially impact exit values.

PE backed companies need to grow faster, operate leaner, and deliver measurable value within tight investment horizons. Digital transformation isn't just a strategic initiative - it's a mandate for survival. Yet, realizing Al's potential requires overcoming critical challenges: fragmented cloud strategies, lack of in-house Al expertise, complex regulatory environments, and difficulty scaling digital transformation efforts at pace.

So, the question emerges, how can you accelerate your agentic AI solutions within your organisations, to maximise value creation?

Join the C-Suite leaders for an exclusive roundtable to explore exactly that. Learn how to navigate cloud modernization complexities, adopt intelligent automation frameworks, and scale AI adoption across your portfolio with confidence, all while reducing transformation timelines by up to 75%.
