THE ART OF LEADING THE INTELLIGENT ENTERPRISE: TRANSFORMING WITH AGENTIC AI

September 17, 2026
6:00 PM-9:30 PM
Greenwich Mean Time

Organizations are moving beyond experimentation with AI and into a new phase of enterprise transformation. By combining AI agents, automation, data, and human expertise, enterprises can reimagine how work gets done across business functions, accelerate decision-making, improve customer experiences, and unlock new levels of operational efficiency and business value.

This exclusive executive roundtable dinner in London brings together CxOs and senior business leaders to discuss how Agentic AI is reshaping the future of the enterprise. The conversation will explore a new approach to transforming business processes through intelligent human and agent collaboration, enabling organisations to simplify complexity, enhance agility, and build more efficient, resilient, and future-ready operations. Attendees will gain practical insights into how leading organisations are redesigning processes, unlocking value across the enterprise, and driving innovation, productivity, and sustainable competitive advantage through intelligent, AI-powered ways of working.

We will share these insights over an exceptional dining experience and fine wine, creating a unique environment for candid peer-to-peer discussion and meaningful connections with fellow business and technology leaders navigating the next era of enterprise transformation.
