APPLICATION SECURITY IN A DEVOPS, CLOUD AND API WORLD

September 28, 2021
3:00 PM-4:15 PM

Eastern Standard Time (EST)

Security teams are challenged to modernize application security practices in light of accelerating shifts to DevOps delivery models and rapid adoption of cloud-native application designs. Applications built on microservices (e.g. serverless, containers, APIs) and delivered continuously are outpacing application security teams ability to secure them. CISOs need to consider new skills, new touch points and new platforms to maintain a strong security posture in light of these trends and the speed at which they are re-shaping IT.
