# FROM AI AMBITION TO TRUSTED DATA ADVANTAGE

**November 24, 2026**
12:00 PM-3:00 PM
Eastern Australia Time

AI is raising the stakes for every organisation's data strategy. Yet many technology leaders are navigating fragmented data estates, escalating operational demands, evolving security expectations and pressure to demonstrate returns from AI investments.

This executive roundtable brings together leaders to explore how a modern data foundation can enable responsible innovation at scale. The discussion will examine how organisations can simplify mission-critical database operations, strengthen governance and resilience, and make trusted data more accessible for analytics and AI.

Key Discussion Points

Turning AI ambition into outcomes: the data, platforms and operating models required to move beyond experimentation.

Modernising mission-critical databases while balancing performance, resilience, security, and cost.

Establishing trusted, governed data foundations across hybrid and cloud environments.
