STRATEGIES FOR FOUNDATIONAL CLOUD  
SECURITY: VISIBILITY, GOVERNANCE AND  
COMPLIANCE

January 20, 2022  
3:00 PM-4:15 PM

Every organization today is in pursuit of digital transformation - enabled by cloud computing. The ability to build and deploy applications with worldwide reach without any large upfront investment or datacenter management expertise has transformed enterprise IT and security.

However, the cloud is perpetually evolving, forcing teams to continually investigate, learn, and apply new architectures and technologies. In this environment of relentless change and persistent threat, security professionals struggle to keep their companies' cloud networks secure. Protecting your enterprise requires not just more security, but new approaches to security. The rise of DevOps and self-owned infrastructure has led to dynamic, highly distributed environments - where organizations often have dozens to hundreds of different environments (or "projects"). The security paradigm for cloud must shift where DevOps and SecOps can collaborate, and the SOC isn't overwhelmed with alerts that lack context.
