VISION VOICES

From Posture to Protection: Why Runtime Is the Heart of CADR

9:15 AM-9:40 AM

Posture identifies risk, but only runtime detects and stops real threats. Without a presence in runtime, detection is incomplete, and response is impossible. This talk breaks down why runtime is the heart of CADR, ensuring real-time visibility, detection, and action to protect cloud workloads where it matters most.

KEYNOTE

A New Era in Cloud Runtime Security: Cloud Application Detection & Response

9:45 AM-10:20 AM

Detecting and responding to cloud attacks has never been more challenging. Modern attacks and the ever-changing nature of cloud infrastructure and applications make security teams' lives more difficult than ever. A new approach is needed - one that can provide a fully traceable & explainable runtime security story spanning the entire cloud technologies stack.

The Modern CISO Strategy and Priorities: Protecting

Cloud Infrastructures and Applications Against Modern Attacks

In recent years, we have added more and more tools to protect our cloud infrastructures and applications , but are we really more secure?

Traditionally, we started with the cloud security posture, but was that the right move?

The cloud security market has grown and changed significantly - from CSPM, to ASPM and CNAPP. It seems that every few months a new category is popping up. But what is still missing? Where should we focus next? posture or runtime? shift left or protect right?
