BALANCING AI WITH THE INDISPENSABLE HUMAN ELEMENT IN CYBERSECURITY

June 19, 2024
5:30 PM-9:00 PM
Eastern Time

Artificial Intelligence is a pervasive part of our lives today and cybersecurity teams and adversaries alike have learned to harness the speed and power of machines to strengthen their capabilities. With machine learning becoming one of the most important tools of defense, leaders must balance the overwhelming speed and accuracy advantage of AI with the need for measured and intuitive interactions with a real-world human element.
Join this session to discuss:
What these trends mean for the hands-on practitioner
What happens when the velocity of innovation outpaces the capabilities of human intellect
The evolving role of automation in the effective practice of securing our digital world

TOGETHER WITH

SentinelOne
