C VISION INTERNATIONAL

AGENDA

Beyond AI Performance: Proving Cyber Risk Reduction and ROI

Virtual Council

SPEAKERS

Prabha Jha
Director, Security
Verizon

Dr. LLOYD DENNIS
VP, Sr. BISO
Bank of America

Amrit Pal Singh Chopra
Head of ITSCM & IT Resilience
AXA XL

Bradley Schaufenbuel
VP & CISO
Paychex

Siddhant Sharma
VP, Technology Audit
Morgan Stanley

Nicolas Gomez
VP, CISO & Head of Information Security
Volvo Group

Lars Brunsgard
CISO & Sr. Director, IT Infrastructure & Operations
Topsoe

Lenny Daich
Global Head of Cybersecurity Audit
BNY

Kaushik Dam
VP, Information Security & Risk Management
Bank of America

Sebastiano Silla
VP, Model Risk Management
Equitable Bank

Brook Dutcher
VP, Cyber Strategic Initiatives
Allied World Assurance Company Inc.

Can Polat
CISO, Information Security, IT & Cyber Risk, Compliance
Bank of China

Establishing a New Standard for Measuring Effectiveness, Safety, Risk, and Business Value

AI is transforming cybersecurity, but as organizations accelerate adoption, a critical question remains: How can you prove that AI is reducing cyber risk, strengthening resilience, and delivering measurable business value?

Traditional benchmarks and demos show what AI can do, but not

necessarily how it will perform in complex, real-world environments, the risks it introduces or the value it delivers. Functionality and safety are essential, but they're only part of the equation. **Organizations must also quantify the business impact of AI-driven decisions and prove the return on their investments.**

Join cybersecurity experts for for an executive discussion a new evidence-based approach to evaluating AI performance, quantifying risk, and measuring ROI.

Join cybersecurity experts **from SecurityScorecard, MITRE, Deloitte, and SimSpace for** an executive discussion on a new evidence-based approach for evaluating AI performance, quantifying rick and measuring agentic ROI:

- **Functionality — Does AI actually perform?** Evaluate offensive and defensive capabilities, autonomy, and reliability through verified outcomes in realistic cyber environments.
- **Safety — Can AI operate within defined guardrails?** Assess human oversight, operational boundaries, and the unintended actions under real-world conditions.
- **Risk — Can you quantify the business consequences of AI?** Measure cyber exposure, business disruption, collateral damage, and risks associated with autonomous decision-making.
- **ROI — Can you prove AI is worth the investment?** Quantify business value through operational efficiency, productivity gains, cost efficiency, and measurable risk reduction.

AI performance alone is not proof of readiness. Learn how objective, repeatable evaluations connect technical performance to business risk and financial outcomes, providing the evidence leaders need to confidently invest in, govern, and operationalize AI.

December 10, 2026

Eastern Time

Welcome & Opening Remarks	11:00 AM-11:03 AM
PANEL Beyond Surface- Level Evaluations: Red & Blue Agent Functionality and Safety	11:03 AM-11:10 AM
PANEL Can a standards-based framework evolve to evaluate AI performance?	11:10 AM-11:45 AM
Q&A Session	11:45 AM-11:55 AM
Key Take Aways & Closing Remarks	11:55 AM-12:00 PM
