FROM CONTACT CENTER AI TO CONNECTED
CX: ORCHESTRATING EVERY INTERACTION

April 15, 2026

3:00 PM-4:15 PM

Eastern Time

This virtual panel brings together two powerful forces reshaping customer experience: AI-driven contact center transformation and end-to-end CX journey orchestration. As customer expectations rise and interactions span marketing, sales, and service, organizations must move beyond siloed automation toward a unified, intelligent experience strategy. Panelists will share real-world examples of how AI-powered agent assist, virtual agents, conversation analytics, and real-time decisioning can reduce cost per interaction, resolve issues faster, and elevate service quality—while connecting each interaction into a seamless customer journey.

The discussion will focus on practical lessons for breaking down organizational silos, identifying high-impact use cases, and integrating AI across existing platforms to scale securely and effectively. Attendees will leave with actionable insights on moving from isolated pilots to cohesive, brand-aligned strategies that orchestrate channels and teams in real time—transforming both the contact center and the broader CX ecosystem into a connected engine for loyalty, efficiency, and measurable business growth.
