TRANSFORMING GLOBAL SUPPLY CHAINS AND MANUFACTURING WITH DATA, AI, AND CLOUD

October 08, 2026
5:30 PM-9:00 PM
Eastern Time

As enterprise leaders navigate fragile global supply networks and shifting markets, the pressure to move past fragmented systems and rigid operating models has never been more urgent. Real growth today demands a shift toward digitally connected value chains that can adapt in real time. Powered by cloud native platforms, predictive AI, digital twins, and intelligent automation, forward thinking organizations are rethinking how they plan, manufacture, and deliver products globally. This transition is not just about adopting new technology, it is about building the quiet operational confidence needed to absorb disruption, protect product quality, and scale with true speed.

This exclusive Capgemini and AWS executive roundtable brings together leaders across industries for a candid peer exchange on driving scalable enterprise transformation. Together, we will examine how to establish trusted data liquidity across planning, engineering, logistics, and quality control to turn isolated proofs of concept into measurable business value.

You will walk away with practical insights on embedding compliance into digital workflows, unlocking genuine resilience, and making the crucial leadership choices that separate quick experiments from long term, enterprise wide success.
