## SCALING GENERATIVE AI: FROM PILOT TO PRODUCTION

Many organizations launch GenAI pilots quickly—but face challenges when scaling or migrating workloads. In this session, experts will share insights from real-world AI migrations and large-scale deployments, including how they

overcame cost and performance hurdles when moving from other platforms to AWS. Learn how they reduced AI infrastructure spend by up to 80% and built a scalable, enterprise-ready foundation for GenAI. We'll explore the journey from promising prototypes to production-ready solutions, with a focus on successfully migrating and scaling AI workloads across business functions. Discover strategies to navigate common migration pitfalls, optimize costs, and set your organization up for sustainable AI success in a multi-cloud environment.
