GET HANDS-ON WITH WIZ + AWS

October 02, 2025

11:30 AM-4:30 PM

Eastern Time

Cloud security doesn't have to be complicated. Join Wiz and AWS for an interactive workshop to see how full visibility and context make securing the cloud simple. In a live AWS environment, you'll explore the Wiz platform through focused modules designed for practitioners. You'll learn how to:

See everything in one place: Instantly inventory your AWS services and workloads

Understand your environment: Explore exposure, entitlements, and secrets with intuitive dashboards

Focus on what matters: Prioritize vulnerabilities with context, not noise

Connect the dots: Visualize relationships with the Wiz Security Graph

You'll leave with:

Real experience using Wiz in AWS

Practical ways to simplify complex cloud environments

A new approach to cloud security that feels clear, connected, and collaborative

This is a hands-on lab with guided exercises and capture-the-flag challenges, built for people who learn best by doing.
