## CLOUD SECURITY

**June 21, 2022**

5:30 PM-8:30 PM

Eastern Time

According to Gartner 79% of companies have experienced at least one cloud data breach during the pandemic. Remote work is here to stay, and the concept of securing a perimeter has essentially ended. Traditional application security measures are broken. The

need to innovate faster and shift to cloud-native application architectures isn't just driving complexity, it's creating significant vulnerability blind spots also. Under the thumb of the pandemic, enterprises and IT leaders had to look for tech solutions that were resilient and agile to empower the remote workforce. To sustain business continuity plans, organizations shifted workloads to the cloud. As much as cloud adoption offers flexibility and productivity, it also exposes organizations to cyber threats and data breaches. So the question remains if moving to the cloud is the right thing to do and if so how to protect it from the new risks given that most organizations believe that application security should be completely automated to keep pace with dynamic clouds and rapid software development practices.

## PANELISTS

**Rafi Buchnick**  
US Head of  
Technology & Cyber  
Risk  
RBC - Royal Bank of  
Canada

**Richard Van Horn**  
VP, Global  
Technology Services  
Geode Capital  
Management

**Todd Gordon**  
Security Director  
Eisner Advisory  
Group

**Peter Chestna**  
CISO, North America
