THE REAL BOTTLENECK TO ENTERPRISE AI: DATA DOESN'T NEED TO MOVE. IT NEEDS TO BE UNDERSTOOD.

November 19, 2026
5:30 PM-9:00 PM
Eastern Time

Enterprises are at a pivotal moment in their security and networking evolution. Hybrid work is permanent, cloud and SaaS adoption continue to accelerate, and AI-driven threats are increasing both in speed and sophistication. As users, applications, and data move beyond the traditional perimeter, enterprises must deliver consistent security and optimized access - everywhere - without increasing operational complexity.
This explores how Secure Access Service Edge (SASE) provides a unified, architecture-driven approach to converging networking and security. Attendees will gain a practical roadmap for evolving toward a scalable SASE strategy in 2026 (and beyond) - one that strengthens identity-centric controls, simplifies operations, reduces architectural sprawl, and enables enterprises to modernize incrementally while protecting existing investments.
