SCALE X RELIABILITY: AGENTIC AI IN PROCUREMENT GETS REAL

November 19, 2026
6:00 PM-9:30 PM
United Kingdom Time

Procurement leaders are under increasing pressure to unlock value from AI while navigating rising expectations around efficiency, resilience, compliance, and cost reduction. Yet many organisations struggle to move beyond isolated use cases and develop a clear path from AI ambition to measurable business outcomes. Co-hosted by Deloitte and AWS, this session will explore how Agentic AI; AI agents that can autonomously execute procurement workflows end-to-end, rather than just surfacing recommendations; is reshaping the enterprise landscape.
This executive roundtable will bring together Chief Procurement Officers and senior procurement leaders to explore how leading organisations are reimagining the Source-to-Pay lifecycle through AI and agentic technologies. The discussion will focus on translating strategic procurement goals into practical capabilities, identifying where AI can drive the greatest impact across the procurement value chain, and building the technology, operating model, and investment case required to scale adoption.
Participants will exchange perspectives on emerging procurement AI use cases, governance considerations, value realisation approaches, and the critical decisions required to move from vision to execution. Attendees will leave with practical insights on creating an implementation-ready business case, prioritising investments, and developing a phased roadmap for AI-enabled procurement transformation.
