**FIRST MOVERS WIN IN THE AI ERA:  
IMPLEMENTING HIGH VELOCITY AND AI  
AUTOMATION IN OPS**

**July 09, 2026**

5:30 PM-9:00 PM

Pacific Time

The organizations shipping the fastest, recovering the quickest, and innovating the boldest share a common trait: they have eliminated the operational bottlenecks that have newly presented themselves in the AI Era. As devs move faster with AI tooling, the pressure on ops teams has massively increased. Alert fatigue, slow incident resolution, and fragmented tooling are speed and innovation killers, and they are entirely solvable with the right AI strategy.

This dinner is a peer conversation for technology leaders who are considering the best approach to implementing and realizing the value of agentic-first ops. Edge Delta AI Teammates represent a new class of collaborative intelligence: multi-agent systems that work across all data types. Integrate with existing tooling, compress decision cycles, eliminate alert fatigue, and dramatically reduce mean time to resolution to keep SRE, DevOps, and Security humans firmly in control as the complexity of production environments continues to increase.

It's more important than ever to accelerate and be a first mover without waiting for the perfect AI strategy. Allow your teams to build velocity in a secure and scalable manner to unlock learning and iteration after every deployment. Eat, drink, and strategize with other technology leaders to successfully widen the gap from your competition.
