AI AGENTS, REAL RISKS: EXECUTIVE STRATEGIES FOR SECURE, SCALABLE ADOPTION

September 16, 2025
5:30 PM-9:00 PM
Eastern Time

AI agents are no longer a concept of the future—they're actively transforming how businesses operate today. As these autonomous systems make decisions, access sensitive data, and act at machine speed, they introduce a new and urgent security challenge: managing a third type of identity that traditional frameworks weren't built to handle.
This exclusive, invitation-only dinner and roundtable will bring together senior security and technology leaders to discuss how to stay ahead of the curve. Through peer-driven conversation, we'll explore how to securely scale AI adoption, establish trust in autonomous systems, and implement the controls and governance models needed to manage risk, ensure accountability, and support regulatory readiness in an AI-driven enterprise.
