MAKING CYBER RESILIENCY A STRATEGIC **IMPERATIVE IN HEALTHCARE**

Heather Haugen

Leader

NTT Ltd.

Eastern Time

As healthcare organizations continue to navigate new care delivery models and more sophisticated cyber-attacks, they must consider a paradigm shift in how they manage cybersecurity. It is simply too costly and inefficient to continue the current practices. Cyber resilience allows healthcare leaders to develop a proactive programmatic approach to deliver comprehensive security across complex organizations through the continuum of care. The approach embeds security into the processes and technology which typically dramatically decreases the time to identify and resolve security events. Cyber resiliency ultimately delivers time back to focus on patient care. Join us for our executive roundtable discussion on enabling the healthcare industry's continued digital evolution, safely and securely.
