

AGENDA

AI Agents That Run Production Executive Dinner

SPEAKERS

Mudassir Ali
Director, Financial
Algorithms
Development
Northwestern Mutual

Manik Repaka
Head of Cloud Data
Platform
BNY Mellon

Diane Chan
Director, Global
Treasury and CIO
Engineering
BNY

Louis Celiberti
Managing Director
Guggenheim Partners

Aleksandar Gyorev
Vice President,
Enterprise Platform
Engineering
Two Sigma

Vikram Damodaran
Director - Software
Engineering and
Data Platforms
IPC Systems, Inc.

Stephen Dantu
MD, Data, AI & Gen
AI Platforms and
Engineering
TIAA

Nikit Assudani
VP, Multi-Cloud
Product & Risk
Delivery Manager
JPMorgan Chase

Spiros Xanthos
Founder & CEO
Resolve AI

AI AGENTS THAT RUN PRODUCTION

January 15, 2026

5:30 PM-9:00 PM

Eastern Time

Join NYC-based engineering executives for an evening of discussions centered on using AI to run production systems, optimize

cost, reduce complexity, and accelerate engineering velocity. Learn from examples deployed across some of today's most successful companies like Coinbase, DoorDash, MSCI, and Zscaler.

While the cost of running, maintaining, and managing the production systems that power their applications balloons, ROI has not kept up. Observability tools proliferate, code multiplies, and the team size to manage it all expands—without resulting in productivity, velocity, or economic gains.

AI is changing that, and this discussion will explore how software, technology, and FinServ companies are deploying it across their production systems.

Topics include:

- Real stories: How companies like Coinbase, DoorDash, and MSCI leverage AI across their production systems
- Actionable advice: Where companies can deliver cost savings and performance improvements across infra and o11y
- Cost optimization tactics: How companies are reducing their number of incidents and the time and team size it takes to resolve them
