ENGINEERING IN 2027: ADAPTING TO AI AND THE FUTURE OF DEVELOPMENT

February 04, 2026
5:30 PM-9:00 PM

Eastern Time

Come together with senior executives to discuss the future of engineering organizations in 2027, specifically how AI will reshape the way engineering teams are structured, managed, and led. As AI continues to drive change across industries, we'll explore how organizations can build and scale engineering teams that thrive in this new landscape. Key topics will include the challenges of integrating AI into the software development life cycle (SDLC), managing risk, and ensuring that AI augments rather than undermines developer trust and product quality. You will leave with actionable insights and learn from organizations already leading the way in AI adoption, as well as exchange ideas on how to navigate the evolving role of engineering in an AI-first world.
