CONNECTED CARE 3.0: TRANSFORM HEALTHCARE DELIVERY WITH DATA & CLOUD

September 26, 2024

5:30 PM-9:00 PM

Pacific Time

Many organizations are using legacy medical devices that today are working in silos to drive diagnostics and therapy for patients. Enabling these devices to connect with other healthcare systems is a challenge and generating insights from these devices using clinical data generated across the healthcare ecosystem is a bigger problem. As the healthcare industry undergoes digital transformation, the integration of advanced technologies is reshaping how care is delivered and managed. This roundtable will focus on the next generation of integrated healthcare solutions that leverage innovative data analytics and cloud computing to create a seamless patient-centered care ecosystem.
