ERP MEETS AI: THE IMPACT OF ARTIFICIAL INTELLIGENCE ON BUSINESS PROCESSES

March 11, 2026

6:00 PM-9:30 PM

Central European Time

Are traditional ERP systems on their way out? Modern AI agents are taking over routine processes, making decision proposals and learning continuously. What will this mean for ERP? Will they replace ERP systems as a form of architecture, or will ERP systems merely take on the role of a central data platform in the future? How will industry-specific ERP systems affect the use of AI? Join us to discuss these questions and more. How far has the AI revolution really come in the ERP environment? What impact does this have on processes, responsibilities, and the role of IT? And: Is a profound change inevitable, or will it be more of an evolutionary expansion?
