When it comes to information security, it's no Longer 'if,' but 'when.' In the very present risk of enterprise

vulnerability, it has never been more necessary for leaders to exhibit adaptability and resilience. Being forced to make quick decisions with high levels of uncertainty requires the latest knowledge in the industry's leading technologies.

The CISO Vision Summit is an executive-level private gathering that provides a platform for the nation's greatest IT security thinkers to collaborate on current industry challenges and trends. Join an elite group of executives to develop, implement and capitalize on innovation through keynotes, fireside chats, panels and innovation roundtable engagements. Leave equipped with the knowledge of a community as collaboration is our strongest asset in the war against cyber crime.

Central Standard Time (CST)

8:20 AM-8:25 AM

KEYNOTE Guarding the Doors: Navigating 3rd Party Risk

It is not a matter of if, but a matter of when. Organizations, more and more, are outsourcing business activities to 3rd-parties because of cost-savings, revenue opportunities, expertise, etc. Thus collaborating with our business partners early to select the right 3rd-party vendor(s) with the appropriate security posture is essential, especially for vendors hosting, processing, and/or transmitting sensitive/regulatory information, or having access to our IT assets.

KEYNOTE What's AI Doing for You?

9:00 AM-9:30 AM

www.cvisionintl.com

8:25 AM-8:55 AM

Often, the terms "Artificial Intelligence" and "Advanced Machine Learning" are thought of interchangeably and while there is a relationship between AI and AML, to say they are the same thing is an oversimplification and misclassification. Rather the one begets the other with AI being the basic principle upon which AML is developed. As AI begins to mature and migrate away from purely advanced mathematical operations into decision making paradigms, AML steps forward as the predictive ability of machines to process vast quantities of data for the purposes of making decisions in ways that first mimic, but ultimately surpass (in terms of speed at the very least) those of humans. As data and analytics becomes foundational to the way every business operates, AI and AML will become foundational capabilities.

VISION KEYNOTE PANEL **Technology Supply Chain**

9:35 AM-10:30 AM

Many large enterprises in today's fiercely competitive climate look toward optimizing its supply chain to increase business scale and agility. By harnessing a combination of technologies like artificial intelligence, machine learning, and predictive analytics, companies can automate and create new customer experiences that increase satisfaction and boost sales. Gaps remain in supply chain cyber security even as digitalization accelerates. By doing so, companies are left vulnerable to the growing risk of a cyber-attack. There are no shortage of stories illustrating the dangers of lax cyber security, with the biggest attacks able to utterly paralyze an operation and cause millions in losses. Despite this obvious danger, efforts to improve cyber security are progressing slowly. Future risks to the supply chain will involve software, cloud-based infrastructures, and hyper-converged products, rather than simply hardware. Even after many years of experience, capable CISOs find they may not be equipped to overcome the cybersecurity concerns that arise from building control contractors.

FIRESIDE CHAT The Greatest Fears?

The biggest fear is not the technology, it is the mistakes made by the people using the technology that could potentially lead to a cyberattack. The majority of CIOs & CISOs agree that an employee carelessly falling victim to a phishing scam is the most likely cause of a security breach. Most also agree that they will not be able to reduce the level of employee disregard for information security. How do we guard against human error without limiting employee efficiency and productivity?

KEYNOTEPatch Management and Endpoint Protection

In today's digitally connected world, there is a good chance your information has been exposed at some point. Last year, we saw major data breaches from companies across several industries because of ransomware attacks. Ransomware attacks and zero-day exploits have greatly stressed the importance of patch management, endpoint protection or Next-Gen Antivirus (NGAV) to all information security professionals. At a time when cybercriminals are constantly seeking weaknesses in firmware and applications, patching is increasingly crucial. Conclusively establishing your patch management process and having an endpoint protection product should be a high priority.

VISION KEYNOTE PANEL Filling the Talent Void

Information Security is a white-hot field. Over the last decade, it has gone from after-thought, to scapegoat, to critical enterprise success factor. As a result, the need for capable and qualified Information Security specialists, whether front-line Analysts, mid-level Managers, or top level CISOs is at an all-time high. However, the availability of personnel with the necessary skills is sinking to an all-time low. There simply is not enough expertise to go around. In this environment, senior Information Security leaders must express creativity in their pursuit of the people, performance, and passion necessary to address this capability shortfall.
