THE FUTURE OF ENTERPRISE INTELLIGENCE: CONNECTING DATA, ANALYTICS, AND AGENTIC AI

September 29, 2026

5:30 PM-9:00 PM

Pacific Time

As AI moves from answering questions to participating in business processes, the central challenge for enterprise leaders is no longer simply adopting models. It is deciding how intelligence should be built, governed, and trusted across a complex organization.

In this candid conversation, Starburst's Chief Data and AI Officer, Adrian Estals and Chuck Desai, leader in the Enterprise Products Group at NVIDIA will examine the changing relationship among data, analytics, and agentic AI: what must be true before AI can be relied upon in consequential workflows; how organizations balance speed with oversight; and where leadership—not technology alone—will determine whether experimentation becomes durable business capability.
