SECURE AI. FUEL INNOVATION: NAVIGATING THE FUTURE OF ENTERPRISE AI

April 21, 2026
6:00 PM-9:30 PM

United Kingdom Time

As AI moves from experimentation to the core of enterprise strategy, CXOs face a new mandate: innovate rapidly while maintaining security, compliance, and trust at scale. Integrating AI into cloud environments unlocks enormous productivity gains—but also introduces new risks around data privacy, model integrity, and operational resilience. The challenge is no longer whether to adopt AI, but how to do so responsibly and sustainably.

This exclusive, peer-level roundtable will explore how leaders can secure the entire AI lifecycle, ensure the integrity and governance of the data powering their models, and reduce complexity through a more unified security architecture. The discussion will also address how organizations can proactively defend against emerging AI-driven threats while enabling teams to confidently build and scale the next generation of intelligent applications.
