

AGENDA

Laying the Foundations: Cloud-Led Modernisation for Trusted AI at Scale

Executive Event

SPEAKERS

Robin Aveline
Head of Cloud
Architecture
Deutsche Bank

Stephen Burrows
Executive Director
DevOps & Platform
Engineering
MSCI

Aman Thind
Global Head
Technology Strategy
& Enterprise
Architecture
JP Morgan Chase

Cyril Dhenaut
Founder

FIRESIDE CHAT

**Laying the Foundations: Cloud-Led Modernisation
for Trusted AI at Scale**

1:00 PM-1:30 PM

As AI adoption accelerates, enterprise success depends on readiness not experimentation alone. Organisations must first modernise legacy environments and establish secure, resilient, and governed cloud and data foundations to enable AI

responsibly and at scale. In the UK, this imperative is shaped by heightened expectations around cyber resilience, regulatory compliance, and data sovereignty. TCS and AWS will outline how cloud-led migration and modernisation provide the structural backbone for enterprise AI adoption. The session will focus on the essential building blocks: modern architectures, trusted data platforms, security-by-design, and governance frameworks that enable organisations to modernise with confidence and futureproof their AI ambitions.

Lunch

1:30 PM-2:45 PM

Modernisation has become a board-level priority, driven by the need to unlock AI-led value while maintaining security, resilience, and trust. As AI evolves from assistive capabilities to autonomous, goal-driven execution, enterprises are rethinking how they modernise operations, decision-making, and customer experience at scale. This CXO panel brings together senior leaders to share peer perspectives on applying cloud and data foundations in practice—reducing complexity, accelerating delivery, and embedding security and governance across the transformation journey. The discussion will explore how agentic AI is reshaping enterprise workflows and customer experience, including the modernisation of contact centres and service journeys, to deliver more resilient, efficient, and personalised outcomes without compromising trust.
