

AGENDA

The Hidden Cost of AI: How CIOs Are Reining in Runaway Warehouse Spend

Virtual Council

SPEAKERS

Russell Christopher
Sr. Director Product Strategy
dbt Labs

Sanjeev Arora
IT Director
National Grid

Sri Kongara
Head of Data Governance
TradeWeb Markets

Awais Bajwa
Head of Data & AI Banking
Bank of America

Alaa Moussawi
Chief Data Scientist - CDO
New York City Council

Joe Vasquez
VP
DE Shaw

Ravi K Nekkhalapu
VP Chief Global Architect & Digital Transformation Executive
Quest Diagnostics Inc

Ram Kumar
Executive/GM/Director - Technology Development
AT&T

Peter Smode
SVP Infrastructure Platforms
JP Morgan Chase

John Suguitan
Global VP Strategic Executive Programs
C-Vision International

Sophine Zhang
AI Head of Data Science
Cisco

THE HIDDEN COST OF AI: HOW CIOs ARE REINING IN RUNAWAY WAREHOUSE SPEND

August 25, 2026

3:00 PM-4:15 PM

Eastern Time

CIOs are under pressure to prove AI's ROI, yet for many, the first tangible result is a warehouse bill growing faster than the business value behind it. The problem isn't the sophistication of the models themselves—it's that agents and copilots operating without structured context make more calls, run more queries, and consume more tokens just to produce reliable answers. Left unchecked, every new model, agent, or use case adds another non-linear jump to a compute curve that's increasingly difficult to forecast, optimize, or explain to the board. Join an exclusive group of data, analytics, and technology executives for a candid peer discussion on what it actually takes to control AI compute costs without slowing innovation. Together, we'll examine where spend is really coming from, how leading organizations are reducing unnecessary compute, and what separates teams turning AI cost into a predictable advantage from those still defending an ever-growing line item. We'll explore the hidden risks of scaling AI without addressing the cost structure underneath it, hear practical lessons from organizations already making measurable progress, and leave with actionable strategies to optimize AI economics, improve cost predictability, and scale AI with confidence.
