**DON'T JUST MODERNISE, EVOLVE: TURNING
LEGACY TRANSFORMATION INTO A
BUSINESS ADVANTAGE**

April 21, 2026

6:00 PM-9:30 PM

Central European Time

In an intimate setting, you'll engage in a frank, peer-level conversation with fellow executives facing the same challenges. Together, you'll explore practical approaches to modernisation, hear how AI-led transformation is already delivering measurable results. The legacy age is over, and the difference between the past and present has never been more stark. The organisations making the boldest strides in legacy transformation aren't just cutting costs – they're fundamentally changing how work gets done. Process simplification and agentic AI are orchestrating entire workflows, freeing teams to focus on crucial innovation. Meanwhile, predictive AI is transforming how organisations act on data, enabling proactive rather than reactive decision-making across operations to drive measurable efficiency gains on a massive scale. Big names like Deutsche Telekom are already applying these evolved capabilities across services, moving beyond mere transformation to reach more than 250 million people and cut application development timelines from weeks to hours.

Key discussion points

- How predictive AI and intelligent automation can improve decisionmaking and operational efficiency
- How AI-led transformation is already delivering measurable results
- Practical lessons from cross-industry organisations applying these capabilities at scale

TOGETHER WITH
