

ENABLING THE INTELLIGENT ENTERPRISE

ABOUT VALOREM REPLY

Valorem Reply is an AI transformation, consulting, and engineering partner helping organizations turn technology investments into business outcomes. We redesign how organizations work, innovate, and grow through AI, data, cloud, security, business applications, and software engineering. Serving industries from technology and manufacturing to healthcare, retail, financial services, nonprofit, and education, we combine strategic guidance, deep technical expertise, and end-to-end delivery to create lasting value. Backed by the global Reply network and deep Microsoft specialization, we help organizations move from AI ambition to measurable results.

OUR EXPERTISE

INFRASTRUCTURE

Unlock the value of your data and leverage AI to drive business outcomes.

- **Cloud Strategy & Readiness**
- **Cloud Modernization**
- **Developer Experience**
- **Cloud Adoption**
- **Cloud Optimization**

DATA & AI

Prepare infrastructures for advanced workloads like AI and ML.

- **Modern Data Platform**
- **Data Visualization & Analytics**
- **AI and Machine Learning**
- **Agents**

APP INNOVATION

Visualize, define, and build intelligent apps that accelerate your product's journey.

- **App Innovation**
- **App Modernization**
- **Secure & Scalable Apps**
- **Modern Engineering**

SECURITY

Optimize security spend through consolidation and safeguard emerging technologies.

- **Data Security**
- **Identity & Access**
- **Threat Protection**
- **Security Copilot**

MODERN WORK

Embrace the future of work and streamline operations with intelligent collaboration tools.

- **M365 Copilot & AI in Modern Work**
- **Employee Experience**
- **Adoption & Change Management**
- **Modern Work Apps & Workflow**
- **Migration**

**Global Scale,
Local Agility**

**Imagination to
Execution**

**Boutique Solution
Provider**

Microsoft Security with Valorem Reply

*Expert delivery, end
to end*

A modular security program spanning cloud infrastructure, identity, email, security operations, endpoints, posture, data, and AI. Every module is delivered hands-on in your own environment by engineers who run these engagements every week.

MICROSOFT SECURITY WITH VALOREM REPLY

A modular security program, delivered hands-on in your own environment.

Engagement highlights

-  Scoped to your estate, not a template
-  Hands-on modules in your own tenant
-  Coverage from cloud to endpoint to AI
-  Delivered by certified security engineers
-  A prioritized remediation roadmap

Security programs rarely fail on strategy—they fail on delivery. This one is built around execution.

Eight areas of coverage assemble into one engagement that matches how you actually operate.

Mandatory modules build the foundation; selectable modules and extensions let you go deeper exactly where it matters.

Excellence in delivery, engagement after engagement

Our engineers run these engagements every week. You get proven configuration paths, live threat exploration in your own tenant, and findings ranked by the risk they actually reduce.

Scoping is a conversation, not a form: start in one area, combine several, or build a fully custom program.

8 coverage areas | modular scoping | hands-on delivery

Built to be assembled with you, not sold off the shelf

Certified engineers, proven playbooks, and a ranked remediation plan on every engagement.

Coverage across your estate

Every area is delivered as hands-on modules, scoped with you before we start.

Infrastructure Cloud and on-premises workloads	Identities and Access Users, privileges, access policy	Email Phishing and collaboration threats	Security Operations Detection, investigation, response
Devices and Endpoints Devices and cloud app access	Security Posture Posture and attack surface	Data Discovery, labeling, loss prevention	AI Agents, models, and AI workloads

Agent 365 Governance Foundation

Secure and operationalize AI agents across your enterprise

8-Week Interactive Engagement

AI AGENT GOVERNANCE CHALLENGE

Organizations adopting AI agents face,

Uncontrolled agent sprawl across the M365 tenant without centralized governance and management

No defined ownership, governance model, or lifecycle management for autonomous AI workloads

Security policies designed for users, not agents; leaving identity, access, and threat detection gaps

ENGAGEMENT APPROACH

KEY OUTCOMES

- ✓ Tenant-wide AI agent inventory and classification
- ✓ Identity governance and Conditional Access for pilot agents
- ✓ Threat detection and DLP policies aligned to agent risk
- ✓ Expansion roadmap for tenant-wide agent governance

WHY VALOREM REPLY?

Agent 365 Launch Partner

Microsoft-selected launch partner with direct access to Agent 365 engineering, product roadmap, and early capabilities

AGENT Framework

Proprietary methodology (Assess, Govern, Enable, Navigate, Track) built from hands-on Agent 365 deployments

Security-First Practice

Recognized Microsoft Security partner with Entra, Defender, and Purview as our founding disciplines

CISO Advisory Depth

Engagements led by security architects fluent in risk, identity, and threat – the language CISOs buy

Benchmark your agent governance maturity in a 90-minute consultation with our security architects. Contact us to get started.
