All data has value, but not all at once. Today's excess data may be exactly what your company needs later to identify a trend, capture a new insight, comply with regulations, or any of a billion other uses. You can't do that if you don't have the data.
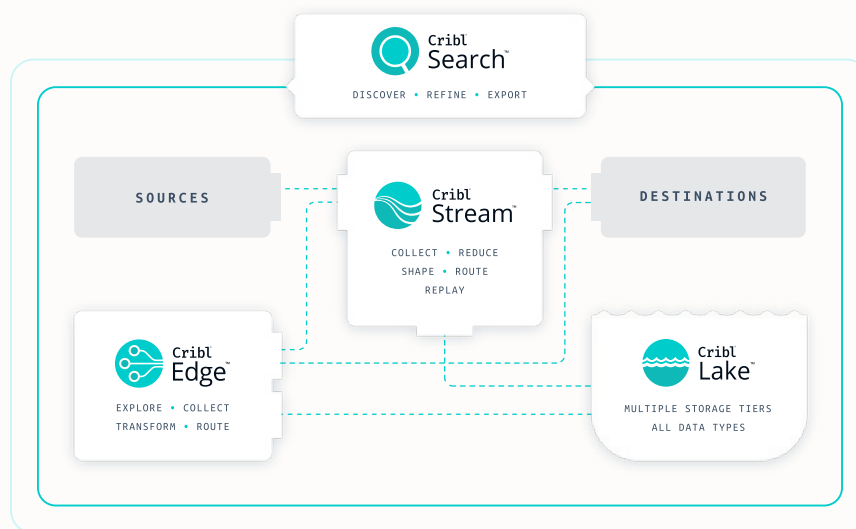

We get it. IT and security teams have so many data challenges: limited resources, massive growth of crazy data in all shapes and sizes, shrinking budgets, and growing compliance requirements. Plus, your data is now distributed across global systems, multiple clouds, and widespread data centers for even more cost and complexity. It seems like a simple decision: reduce your data problems by reducing your data, but we all know that simply reducing can create future challenges. What we need is a clear path to making sure the right data is in the right places and you can access whatever you need once you need it.

Cribl, the Data Engine for IT and Security teams, uses the power of the cloud to create a globally distributed data infrastructure that's capable of exploring and processing billions of events per second – from any source or data store, anywhere. It extracts only the valuable data that your teams need, when they need it, in the desired format, and with the ability to recall and rehydrate that data at will. And most importantly, it remains your data, stored in open formats, and accessible by Cribl systems or whatever tooling you need now, or in the future.

Here's what you can expect from Cribl

Architectural flexibility
Begin where you are. Cribl products adapt to your environment, and can be deployed independently or as a unified engine.

Protocol-based simplicity
Choose to collect or send data to any data store from anywhere, including directly from the agent, and access data at rest through a simple, centralized query experience.

Data independence
Own your data in open formats in your control. We don't believe in vendor lock-in.

Global scale
Process billions of events per second with petabytes of daily volume along with thousands of unique schemas and shapes of data.

Meet your needs now and in the future with Cribl's product portfolio, adapting as your data complexities and requirements evolve. Our products aren't built for just anyone. They're built for you.

RECORD GROWTH

Surpassed $100 million in annual recurring revenue in less than four years, becoming the fourth-fastest infrastructure company to reach centaur status.

ENTERPRISE ADOPTION

The Fortune 50 and beyond, including: Aramark, Autodesk, Chevron, Emerson Electric, Leidos, Lowes, S&P Global, The Gap, TransUnion, ViacomCBS, and more.

SEAMLESS INTEGRATIONS

Rely on seamless integrations with tools like Elasticsearch, Splunk, or CrowdStrike. Analyze, collect, process, and route your data no matter where it is.

STRONG BACKING

Strategic investment from top VCs including CRV, Sequoia, Greylock, Redpoint, IVP, and Tiger Global.

EXPERIENCED LEADERSHIP

Executives from industry-pioneering companies including Splunk, Google, Snowflake, ServiceNow, AppDynamics, and Extreme Networks.

FIRST PRINCIPLES

Software designed with a customers-first mentality to solve real problems from the ground up.
