

SolutionLab and **Fort Una** have partnered-up to deliver fully integrated services for Threat-Led Penetration Testing (TLPT) and TIBER-EU. Our partnership connects realistic threat scenarios with high-quality adversarial

DORA TLPT & TIBER-EU

testing and controlled test execution, leading to a DORA & TIBER-EU compliant test. The test is done, lets get to work!- we offer board advisory services to help build your (cyber) resilience adequately and compliant.

WHAT WE OFFER

- Tailored threat assessment, aligned to your organization. Attack- and threat-scenarios highlighting your greatest risk and their potential impact.
- High-end red team execution based on the threat scenarios.
- Clear and concise reporting. Condensed quality and less pages.
- Close collaboration with your experts. You already have the knowledge; we help to weaponize it.
- Based on your outcomes, we help strengthen your organization's cyber resilience from top-to-bottom.
- Board advisory services helping you strengthen your cyber resilience and overall resilience.

HOW WE OPERATE

1 Fathom your organization

By thorough preparation, we truly understand the client needs. Clarity about the problem is half of the solution. We speak with the people who know your organization best; technical and business alike. Understanding external threats starts from understanding your business.

3 Preparing the scenarios

Forget Artificial 'Intelligence'. Forget lengthy reports. Bring in the whiteboard! After tried-and-tested preparation, we work with you to map the cyber threat landscape. We define threat scenarios that are most likely and most impactful for your organization.

5 Strengthening resilience

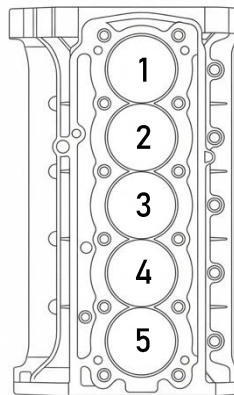

Once the dust has settled, we help you strengthen your organization's cyber resilience against the identified threats. We focus on organizational design and strategic guidance, enhancing your maturity.

2 Assemble the experts

Every engagement demands a different mix of expertise. That's why we make a selection of our highly specialized professionals across various industries. For each assignment, we assemble a modular team, best suited to the challenge.

4 Emulating the scenarios

Based on market standard frameworks like TIBER-EU and DORA TLPT, we execute adversarial testing in a fully controlled manner. This way we test your organization's resilience. Determining your resilience can also be done through a NIST CFS assessment or a tabletop exercise.

SolutionLab services

- Penetration testing, red teaming and cyber security assessments across infrastructure, applications and cloud.
- End-to-end cyber capabilities including SOC, incident response and cyber crisis support.
- Proven experience delivering security services across multiple sectors among which financial services, public sector and enterprise environments.
- Certified, standards-aligned delivery (e.g. ISO 27001, CREST) with a focus on quality, scalability and regulator-aligned execution.
